GALECTIN THERAPEUTICS INC.
NOTES TO UNAUDITED CONDENSED CONSOLIDATED FINANCIAL STATEMENTS

1. Basis of Presentation and Liquidity

Galectin Therapeutics Inc. and subsidiaries (the "Company") is a clinical stage biopharmaceutical company that is applying its leadership in galectin science and drug development to create new therapies for fibrotic disease and cancer. These candidates are based on the Company's targeting of galectin proteins which are key mediators of biologic and pathologic function. These compounds also may have application for drugs to treat other diseases and chronic health conditions.

The unaudited condensed consolidated financial statements as reported in this Quarterly Report on Form 10-Q reflect all adjustments which are, in the opinion of management, necessary to present fairly the financial position of the Company as of September 30, 2026 and the results of its operations for the three and nine months ended September 30, 2026 and 2025 and its cash flows for the nine months ended September 30, 2026 and 2025. All adjustments made to the interim financial statements include all those of a normal and recurring nature. Amounts presented in the condensed consolidated balance sheet as of December 31, 2025 are derived from the Company's audited consolidated financial statements as of that date, but do not include all of the information and footnotes required by accounting principles generally accepted in the United States of America for complete financial statements. The Company considers events or transactions that occur after the balance sheet date but before the financial statements are issued to provide additional evidence relative to certain estimates or to identify matters that require additional disclosure. Subsequent events have been evaluated through the date these financial statements are available to be issued. The results for interim periods are not necessarily indicative of results that may be expected for any other interim period or for the full year. The unaudited condensed consolidated financial statements of the Company should be read in conjunction with its Annual Report on Form 10-K for the year ended December 31, 2025.

These consolidated financial statements have been prepared in accordance with US generally accepted accounting principles (GAAP) assuming the Company will continue as a going concern. The going concern assumption contemplates the realization of assets and satisfaction of liabilities in the normal course of business.

The Company has operated at a loss since its inception and has had no revenues. The Company anticipates that losses will continue for the foreseeable future. At September 30, 2026, the Company had $11.7 million of unrestricted cash and cash equivalents available to fund future operations. As of September 30, 2026, the Company has available borrowings under a line of credit in the amount of $10 million provided by our chairman, Richard Uihlein, (See Note 10). All of the Company's borrowings and accrued interest under related party debt to its chairman are due to mature on June 30, 2027. The Company believes there is sufficient cash, including availability of the line of credit, to fund currently planned operations through June 2027. These factors raise substantial doubt about the Company's ability to continue as a going concern for a period of 12 months from the issuance date of these financial statements. The ability of the Company to continue as a going concern is dependent on its ability to raise capital; however, the Company's cash position may not be sufficient to support its daily operations after June 2027. To meet its future capital needs, the Company intends to raise additional capital through debt or equity financings, collaborations, partnerships or other strategic transactions. However, there can be no assurance that the Company will be able to complete any such transactions on acceptable terms or otherwise. The inability of the Company to obtain sufficient funds on acceptable terms when needed could have a material adverse effect on the Company's business, results of operations and financial condition.

The Company was founded in July 2000, was incorporated in the State of Nevada in January 2001 under the name "Pro-Pharmaceuticals, Inc.," and changed its name to "Galectin Therapeutics Inc." on May 26, 2011.

2. Accrued Expenses and Other

Accrued expenses consist of the following:

	September 30, 2026	December 31, 2025
	(in thousands)	
Legal and accounting fees	$ 137	$ 68
Accrued compensation	986	1,056
Lease liability	62	22
Accrued research and development costs and other	2,970	3,576
Total	$ 4,155	$ 4,722

Research and development expenses, including personnel costs, allocated facility costs, lab supplies, outside services, contract laboratory costs related to manufacturing drug product, clinical trials and preclinical studies are charged to research and development expense as incurred. The Company accounts for nonrefundable advance payments for goods and services that will be used in future research and development activities as expense when the service has been performed or when the goods have been received. Our current NAVIGATE clinical trial is being supported by third-party contract research organizations, or CROs, and other vendors. We accrue expenses for clinical trial activities performed by CROs based upon the estimated amount of work completed on each trial. For clinical trial expenses and related expenses associated with the conduct of clinical trials, the significant factors used in estimating accruals include the number of patients enrolled, the number of active clinical sites, and the duration for which the patients have been enrolled in the trial. We monitor patient enrollment levels and related activities to the extent possible through internal reviews, review of contractual terms and correspondence with CROs. We base our estimates on the best information available at the time. However, additional information may become available to us which will allow us to make a more accurate estimate in future periods. In that event, we may be required to record adjustments to research and development expenses in future periods when the actual level of activity becomes more certain.

3. Convertible Notes Payable – Related Party

On April 16, 2021, the Company and Richard E. Uihlein entered into a debt financing arrangement whereby Mr. Uihlein loaned $10,000,000 to the Company. In consideration for the loan, the Company issued a convertible promissory note (the "April 2021 Note") in the principal amount of ten million dollars.

The April 2021 Note had an original maturity date of April 16, 2025, is prepayable at the option of the Company in whole or in part at any time and is convertible into the Company's common stock at a conversion price equal to $5.00 per share at the option of the noteholder. The April 2021 Note bears interest at the rate of two percent (2%) per annum, compounded annually with an effective interest rate of approximately 3%. For the nine months ended September 30, 2026 and 2025, approximately $164,000 and $162,000, respectively, of interest expense was accrued and included with the principal in the financial statements.

The April 2021 Note also includes a contingent interest component that requires the Company to pay additional interest at a rate of two and one-half percent (2.5%) per quarter (10% per annum) (the "Additional Interest") beginning on the date of issuance of this Note and ending on the maturity date, provided however, that such payment is only required if and only if the noteholder elects to convert the entire balance of the April 2021 Note into the Company's common stock on or prior to maturity. As the contingent event is not based on creditworthiness, such feature is not clearly and closely related to the host instrument and accordingly must be bifurcated and recognized as a derivative liability and a debt discount on the April 2021 Note at its inception. The fair value of the contingent interest derivative liability was $420,000 at note inception (April 16, 2021). The amortization of the original $420,000 debt discount of $31,000 was recorded as additional interest expense for the nine months ended September 30, 2025. The debt discount was fully amortized at December 31, 2025.

On May 14, 2024, Mr. Uihlein, as holder of the April 2021 Note irrevocably elected to convert the entire principal amount of such note, plus accrued and unpaid interest, into shares of common stock of the Company at a price of $5.00 per share, effective as of April 16, 2025, which is the maturity date of the April 2021 Note. In connection with entering into the March 2025 Supplemental Line of Credit (see Note 10), the Company agreed to extend the maturity date of the Convertible Promissory Note dated April 2021 from April 16, 2025 to September 30, 2025. Additionally, in connection with entering into the July 2025 Supplemental Line of Credit (see Note 10), the Company agreed to extend the maturity date of the Convertible Promissory Note dated April 2021 (and the September 2021 and December 2021 Convertible Notes) from September 30, 2025 to September 30, 2026. Finally, in connection with entering into the December 2025 Supplemental Line of Credit (see Note 9), the Company agreed to extend the maturity date of the Convertible Promissory Note dated April 2021 (and the September 2021 and December 2021 Convertible Notes) from September 30, 2026 to June 30, 2027. The April 2021 Note will remain outstanding and accrue interest until maturity, and no shares of common stock will be issued as a result of this election until June 30, 2027.

The September 2021 Note had an original maturity date of September 17, 2025, is prepayable at the option of the Company in whole or in part at any time and is convertible into the Company's common stock at a conversion price equal to $8.64 per share at the option of the noteholder. The September 2021 Note bears interest at the rate of two percent (2%) per annum, compounded annually with an effective interest rate of approximately 3%. For the nine months ended September 30, 2026 and 2025, approximately $162,000 and $160,000, respectively, of interest expense was accrued and included with the principal in the financial statements.

The September 2021 Note also includes a contingent interest component that requires the Company to pay additional interest at a rate of two and one-half percent (2.5%) per quarter (10% per annum) (the "Additional Interest") beginning on the date of issuance of this Note and ending on the maturity date, provided however, that such payment is only required if and only if the noteholder elects to convert the entire balance of the September 2021 Note into the Company's common stock on or prior to maturity. As the contingent event is not based on creditworthiness, such feature is not clearly and closely related to the host instrument and accordingly must be bifurcated and recognized as a derivative liability and a debt discount on the September Note at its inception. The fair value of the contingent interest derivative liability was $433,000 at note inception (September 17, 2021). The amortization of the original $433,000 debt discount of $81,000 was recorded as additional interest expense for the nine months ended September 30, 2025. The debt discount was fully amortized at December 31, 2025.

On December 20, 2021, the second of the two promissory notes under the Loan Agreement was executed and delivered, (the "December 2021 Note") to evidence the second loan in the principal amount of $10,000,000. The December 2021 Note had an original maturity date of December 20, 2025, is prepayable at the option of the Company in whole or in part at any time and is convertible into the Company's common stock at a conversion price equal to $5.43 per share at the option of the noteholder. The December Note bears interest at the rate of two percent (2%) per annum, compounded annually with an effective interest rate of approximately 3%. For the nine months ended September 30, 2026 and 2025, approximately $162,000 and $159,000, respectively, of interest expense was accrued and included with the principal in the financial statements.

The December 2021 Note also includes a contingent interest component that requires the Company to pay additional interest at a rate of two and one-half percent (2.5%) per quarter (10% per annum) (the "Additional Interest") beginning on the date of issuance of this Note and ending on the maturity date, provided however, that such payment is only required if and only if the noteholder elects to convert the entire balance of the December 2021 Note into the Company's common stock on or prior to maturity. As the contingent event is not based on creditworthiness, such feature is not clearly and closely related to the host instrument and accordingly must be bifurcated and recognized as a derivative liability and a debt discount on the December Note at its inception. The fair value of the contingent interest derivative liability was $415,000 at note inception (December 20, 2021). The amortization of the original $415,000 debt discount of $78,000 was recorded as additional interest expense for the nine months ended September 30, 2025. The debt discount was fully amortized at December 31, 2025.

The Company's contractual cash obligations related to the outstanding convertible notes payable is a repayment of the September 2021 Note of the $10,000,000 plus accrued interest on June 30, 2027 and a repayment of the December 2021 Note of the $10,000,000 plus accrued interest on June 30, 2027, unless converted at the option of the noteholder.

4. Fair Value of Financial Instruments

The Company has certain financial assets and liabilities recorded at fair value. Fair values determined by Level 1 inputs utilize observable data such as quoted prices in active markets. Fair values determined by Level 2 inputs utilize data points other than quoted prices in active markets that are observable either directly or indirectly. Fair values determined by Level 3 inputs utilize unobservable data points in which there is little or no market data, which require the reporting entity to develop its own assumptions. The carrying amounts reflected in the consolidated balance sheets for cash equivalents, accounts payable and accrued expenses approximate their carrying value due to their short-term nature. There were no level 1 or 2 assets or liabilities at September 30, 2026 or December 31, 2025. See below for Fair Value of Derivatives related to Convertible Notes Payable at September 30, 2026 and December 31, 2025, which are level 3 liabilities.

Level 3 assets and liabilities measured and recorded at fair value on a recurring basis at September 30, 2026 and December 31, 2025 were as follows:

	September 30, 2026	December 31, 2025
Derivative Liability – Contingent Interest April Note	$ 2,542,000	$ 1,680,000
Derivative Liability – Contingent Interest September Note	$ 1,037,000	$ 924,000
Derivative Liability – Contingent Interest December Note	$ 1,962,000	$ 1,358,000

The April Note derivative liability – contingent interest was valued using a Monte Carlo Geometric Brownian Stock Path Model. The key assumptions used in the model at September 30, 2026 and December 31, 2025 are as follows:

	September 30, 2026	December 31, 2025
Stock Price	$ 3.88	$ 4.16
Conversion Price of conversion feature	$ 5.00	$ 5.00
Term	0.75 year	1.5 years
Risk Free Interest Rate	4.54%	3.48%
Credit Adjusted Discount Rate	16.26%	12.03%
Volatility	88.6%	113%
Dividend Rate	0%	0%

The roll forward of the April Note derivative liability – contingent interest is as follows for the nine months ended September 30, 2026 and 2025:

Balance – December 31, 2025	$ 1,680,000
Fair Value Adjustment	862,000
Balance – September 30, 2026	$ 2,542,000
Balance – December 31, 2024	$ 47,000
Fair Value Adjustment	1,547,000
Balance – September 30, 2025	$ 1,594,000

The September Note derivative liability – contingent interest was valued using a Monte Carlo Geometric Brownian Stock Path Model. The key assumptions used in the model at September 30, 2026 and December 31, 2025 are as follows:

	September 30, 2026	December 31, 2025
Stock Price	$ 3.88	$ 4.16
Conversion Price of conversion feature	$ 8.64	$ 8.64
Term	0.75 year	1.5 years
Risk Free Interest Rate	4.54%	3.48%
Credit Adjusted Discount Rate	16.26%	12.03%
Volatility	88.6%	113%
Dividend Rate	0%	0%

The roll forward of the September Note derivative liability – contingent interest is as follows for the nine months ended September 30, 2026 and 2025:

Balance – December 31, 2025	$ 924,000
Fair Value Adjustment	113,000
Balance – September 30, 2026	$ 1,037,000
Balance – December 31, 2024	$ 94,000
Fair Value Adjustment	714,000
Balance – September 30, 2025	$ 808,000

The December Note derivative liability – contingent interest was valued using a Monte Carlo Geometric Brownian Stock Path Model. The key assumptions used in the model at September 30, 2026 and December 31, 2025 are as follows:

	September 30, 2026	December 31, 2025
Stock Price	$ 3.88	$ 4.16
Conversion Price of conversion feature	$ 5.43	$ 5.43
Term	0.75 year	1.5 years
Risk Free Interest Rate	4.54%	3.48%
Credit Adjusted Discount Rate	16.26%	12.03%
Volatility	88.6%	113%
Dividend Rate	0%	0%

The roll forward of the December Note derivative liability – contingent interest is as follows for the nine months ended September 30, 2026 and 2025:

Balance – December 31, 2025	$ 1,358,000
Fair Value Adjustment	604,000
Balance – September 30, 2026	$ 1,962,000
Balance – December 31, 2024	$ 275,000
Fair Value Adjustment	1,065,000
Balance – September 30, 2025	$ 1,340,000

5. Stock-Based Compensation

Following is the stock-based compensation expense related to common stock options, restricted common stock, common stock warrants and deferred stock units:

	Three Months Ended September 30,		Nine Months Ended September 30,	
	2026	2025	2026	2025
	in thousands			
Research and development	$ 326	$ 250	$ 949	$ 780
General and administrative	623	248	1,738	684
Total stock-based compensation expense	$ 949	$ 498	$ 2,687	$ 1,464

The following table summarizes the stock option activity in the Company's equity incentive plans, including non-plan grants to Company executives, from December 31, 2025 through September 30, 2026:

	Shares	Weighted Average Exercise Price
Outstanding, December 31, 2025	6,572,509	$ 2.27
Granted	1,020,000	3.05
Exercised	(389,912)	1.70
Options forfeited/cancelled	(211,583)	2.72
Outstanding, September 30, 2026	6,991,014	$ 2.40

As of September 30, 2026, there was $1,024,100 of unrecognized compensation related to 1,062,500 unvested options, which is expected to be recognized over a weighted–average period of approximately 0.6 years. The weighted-average grant date fair value for options granted during the nine months ended September 30, 2026 was $2.22. The Company granted 1,020,000 stock options during the nine months ended September 30, 2026.

The fair value of all other options granted is determined using the Black-Scholes option-pricing model. The following weighted average assumptions were used:

	Three Months Ended September 30, 2026	Three Months Ended September 30, 2025
Risk-free interest rate	3.83%	4.48%
Expected life of the options	5.6 years	5.6 years
Expected volatility of the underlying stock	88%	83%
Expected dividend rate	0%	0%

In January 2026, the Company's board chairman elected to take restricted stock grants in lieu of cash retainers for 2025. A total of 13,158 shares of restricted stock valued at approximately $40,000 is being amortized to expense on a straight-line basis until December 31, 2026 when the stock vests in full. In January 2025, the Company's board chairman elected to take restricted stock grants in lieu of cash retainers for 2025. A total of 32,250 shares of restricted stock valued at approximately $40,000 is being amortized to expense on a straight-line basis until December 31, 2025 when the stock vested in full.

In January 2026, the Company issued 505,000 restricted stock units to its employees valued at $1,535,000 at the date of grant. These restricted stock units will vest 100% on the earlier of entering into a partnership or December 31, 2026. The Company believes that is probable that the vesting condition will be met and is amortizing the restricted stock unit expense ratably in 2026. The amount of expense recorded during the three and nine months ended September 30, 2026 was $404,000 and $1,132,000.

In January 2025, the Company issued 504,000 restricted stock units to its employees valued at $620,000 at the date of grant. These restricted stock units will vest 100% on the earlier of entering into a partnership or December 31, 2025. The Company believes that is probable that the vesting condition will be met and is amortizing the restricted stock unit expense ratably in 2025. The amount of expense recorded during the three and nine months ended September 30, 2025 was $154,000 and $421,000, respectively.

In September 2020, the Company entered into an employment agreement with its new Chief Executive Officer whereby 20% of his base salary and performance bonuses will be paid in cash, and 80% will be paid in the form of deferred stock units ("DSUs") through December 31, 2022 in accordance with the terms and subject to the provisions set forth in the DSU Agreement. DSUs credited to Mr. Lewis as of any date shall be fully vested and nonforfeitable at all times. Pursuant to an amendment to the DSU Agreement in July 2022, the Company shall issue the shares earned through December 31, 2022 underlying the outstanding whole number of DSUs credited to Mr. Lewis as follows: twenty five percent shall be issued on March 1, 2023, fifty percent shall be issued on March 1, 2024 and twenty five percent shall be issued on September 1, 2028. Additionally, a 2023 DSU Agreement was executed in July 2022, whereby Mr. Lewis would continue to receive 20% of salary in cash and 80% in DSUs through December 31, 2023. The shares under the 2023 DSU Agreement are to be issued fifty percent on March 1, 2025 and fifty percent on January 5, 2026.

On January 5, 2026, fifty percent of the DSU's were issued to Mr. Lewis in accordance with the 2023 DSU Agreement. A total of 137,563 shares were due to be issued; however, 56,336 shares were withheld to cover income tax withholding of $218,568 resulting in 81,232 shares actually issued.

On March 1, 2025, fifty percent of the DSU's were issued to Mr. Lewis in accordance with the 2023 DSU Agreement. A total of 137,563 shares were due to be issued; however, 56,420 shares were withheld to cover income tax withholding of $88,579 resulting in 81,144 shares actually issued.

There is no unrecognized compensation expense related to the DSUs.

6. Common Stock Warrants

The following table summarizes the common stock warrant activity from December 31, 2025 through September 30, 2026:

	Shares	Weighted Average Exercise Price
Outstanding, December 31, 2025	4,172,144	$ 5.93
Granted	—	—
Exercised	—	—
Forfeited/cancelled	(2,622,144)	7.00
Outstanding, September 30, 2026	1,550,000	$ 4.13

The weighted average expiration of the warrants outstanding as of September 30, 2026 is 2.8 years.

7. Loss Per Share

Basic net loss per common share is computed by dividing the net loss available to common stockholders by the weighted average number of common shares outstanding during the period. Diluted net loss per common share is computed by dividing the net loss available to common stockholders by the weighted average number of common shares and other potential common shares then outstanding. Potential common shares consist of common shares issuable upon the assumed exercise of in-the-money stock options and warrants and potential common shares related to the conversion of the preferred stock. The computation of diluted net loss per share does not assume the issuance of common shares that have an anti-dilutive effect on net loss per share.

Dilutive shares which could exist pursuant to the exercise of outstanding stock instruments and which were not included in the calculation because their affect would have been anti-dilutive are as follows:

	September 30, 2026	September 30, 2025
	(shares)	(shares)
Warrants to purchase shares of common stock	1,550,000	3,972,154
Options to purchase shares of common stock	6,991,014	7,324,420
Restricted stock units	518,158	496,520
Shares of common stock issuable upon conversion of convertible notes payable – related party	8,090,139	7,479,217
Shares of common stock issuable upon conversion of convertible line of credit – related party	—	30,103,330
Shares of common stock issuable upon conversion of preferred stock	490,840	495,007
	17,640,151	49,870,648

8. Common Stock

2020 At Market Issuance of Common Stock

On May 11, 2020, the Company entered into an At Market Issuance Sales Agreement (the "2020 At Market Agreement") with a sales agent under which the Company may issue and sell shares of its common stock having an aggregate offering price of up to $40.0 million from time to time through the sales agent. Sales of the Company's common stock through the sales agent, if any, will be made by any method that is deemed an "at the market" offering as defined by the U.S. Securities and Exchange Commission. The Company will pay to the sales agent a commission rate equal to 3.0% of the gross proceeds from the sale of any shares of common stock sold through the sales agent under the 2020 At Market Agreement. During the three months ended September 30, 2026 and 2025, the Company issued 118,900 and 174,600 shares of common stock under the 2020 At Market Agreement, respectively, for net proceeds of approximately $600,000 and $853,000, respectively. During the nine months ended September 30, 2026 and 2025, the Company issued 400,000 and 592,504 shares of common stock under the 2020 At Market Agreement, respectively, for net proceeds of approximately $1,894,000 and $2,071,000, respectively.

For each of the nine months ended September 30, 2026 and 2025, the Company issued a total of 54,912 and 53,482 shares of common stock, respectively, for dividends on Series A and Series C Preferred Stock.

9. Convertible Line of Credit – Related Party and Supplemental Convertible Lines of Credit – Related Party

On July 25, 2022, the Company and Richard E. Uihlein (the "Lender") entered into a Line of Credit Letter Agreement (the "Credit Agreement"), pursuant to which the Lender shall provide the Company a line of credit of up to $60.0 million (the "Line of Credit") to finance the Company's working capital needs. The Company may draw upon the Line of Credit through July 31, 2024.

Each advance made pursuant to the Credit Agreement shall be evidenced by an unsecured, convertible promissory note (individually, a "Promissory Note," and collectively, the "Promissory Notes"), and bear interest at the Applicable Federal Rate for short term loans, plus two (2%) percent. Principal and interest on the Promissory Notes were originally due on or before January 31, 2026, however, the maturity date was extended to September 30, 2026 in connection with a new line of credit dated July 8, 2025. Due to the extension of the maturity date for all lines of credit, the remaining amortization expense of the warrants issued with each draw was adjusted prospectively from July 8, 2025 through September 30, 2026. In connection with another new line of credit dated December 31, 2025, the maturity date for all lines of credit was extended to June 30, 2027. Only with the consent of the Lender, may the Promissory Notes be prepaid, in whole or in part, at any time without premium or penalty, but with interest on the amount or amounts prepaid.

At the election of Lender, the principal and accrued interest on Promissory Note(s) may be converted into the number of shares of the Company's Common Stock equal to the amount of principal and accrued interest on such Promissory Note divided by the price equal to the closing price of the Common Stock on the date of such Promissory Note, but in no event less than $3.00 per share.

In connection with the Credit Agreement, the Company agreed to issue the Lender warrants to purchase up to an aggregate of 1,700,000 shares of the Company's common stock, par value $0.001 per share (collectively, the "Warrants"). Upon execution of the Credit Agreement, the Company issued the Lender a Warrant to purchase up to 500,000 shares of Company's Common Stock at an exercise price of $5.00 per share, which Warrant is exercisable upon issuance. Further, pursuant to the Credit Agreement, the Company shall issue to the Lender additional Warrants to purchase up to the remaining 1,200,000 shares of the Company's common stock, ratably, upon borrowings under the Credit Agreement, with exercise prices equal to 150% of the closing price of the Company's common Stock on the date of the Promissory Note evidencing such draw, but in no event more than $10.00 per share nor less than $3.00 per share. The Warrants expire on July 31, 2029.

On March 29, 2024, the Company and Richard E. Uihlein (the "Lender") entered into a Supplemental Line of Credit Letter Agreement (the "Supplemental Credit Agreement"), pursuant to which the Lender shall provide the Company a line of credit of up to $10.0 million (the "Supplemental Line of Credit") to finance the Company's working capital needs. The Company may draw upon the Supplemental Line of Credit through March 31, 2025.

Each advance made pursuant to the Supplemental Credit Agreement shall be evidenced by an unsecured, convertible promissory note (individually, a "Promissory Note," and collectively, the "Promissory Notes"), and bear interest at the Applicable Federal Rate for short term loans, plus two (2%) percent. Principal and interest on the Promissory Notes are due on or before January 31, 2026, which was extended through June 30, 2027 in connection with the December 2025 agreement. Only with the consent of the Lender, may the Promissory Notes be prepaid, in whole or in part, at any time without premium or penalty, but with interest on the amount or amounts prepaid.

At the election of Lender, the principal and accrued interest on Promissory Note(s) may be converted into the number of shares of the Company's Common Stock equal to the amount of principal and accrued interest on such Promissory Note divided by the price equal to the closing price of the Common Stock on the date of such Promissory Note, but in no event less than $3.00 per share.

In connection with the Supplemental Credit Agreement, the Company agreed to issue the Lender warrants to purchase up to an aggregate of 200,000 shares of the Company's common stock, par value $0.001 per share (collectively, the "Warrants"). The Company shall issue to the Lender Warrants ratably, upon borrowings under the Supplemental Line of Credit, with exercise prices equal to 150% of the closing price of the Company's common Stock on the date of the Promissory Note evidencing such draw, but in no event more than $10.00 per share nor less than $3.00 per share. The Warrants expire on July 31, 2029.

On November 14, 2024, the Company and Richard E. Uihlein (the "Lender") entered into an additional Supplemental Line of Credit Letter Agreement (the "November 2024 Supplemental Credit Agreement"), pursuant to which the Lender shall provide the Company a line of credit of up to $6.0 million (the "November 2024 Supplemental Line of Credit") to finance the Company's working capital needs. The Company may draw upon the November 2024 Supplemental Line of Credit, as amended, through May 31, 2025. On April 30, 2025, The Company executed a $6 million promissory note under the November 2024 Supplemental Line of Credit.

Each advance made pursuant to the November 2024 Supplemental Credit Agreement shall be evidenced by an unsecured, convertible promissory note (individually, a "Promissory Note," and collectively, the "Promissory Notes"), and bear interest at the Applicable Federal Rate for short term loans, plus two (2%) percent. Principal and interest on the Promissory Notes are due on or before March 31, 2026, which was extended to June 30, 2027 as part of the December 2025 agreement. Only with the consent of the Lender, may the Promissory Notes be prepaid, in whole or in part, at any time without premium or penalty, but with interest on the amount or amounts prepaid.

At the election of Lender, the principal and accrued interest on Promissory Note(s) may be converted into the number of shares of the Company's Common Stock equal to the amount of principal and accrued interest on such Promissory Note divided by the price equal to the closing price of the Common Stock on the date of such Promissory Note, but in no event less than $3.00 per share.

In connection with the November 2024 Supplemental Credit Agreement, the Company agreed to issue the Lender warrants to purchase up to an aggregate of 120,000 shares of the Company's common stock, par value $0.001 per share (collectively, the "Warrants"). The Company shall issue to the Lender Warrants ratably, upon borrowings under the November 2024 Supplemental Line of Credit, with exercise prices equal to 150% of the closing price of the Company's common Stock on the date of the Promissory Note evidencing such draw, but in no event more than $10.00 per share nor less than $3.00 per share. The Warrants expire on July 31, 2029.

On March 31, 2025, the Company and Richard E. Uihlein (the "Lender") entered into a Supplemental Line of Credit Letter Agreement (the "March 2025 Supplemental Credit Agreement"), pursuant to which the Lender shall provide the Company a line of credit of up to $5.0 million (the "March 2025 Supplemental Line of Credit") to finance the Company's working capital needs. The Company may draw upon the March 2025 Supplemental Line of Credit through September 30, 2025.

Each advance made pursuant to the March 2025 Supplemental Credit Agreement shall be evidenced by an unsecured, convertible promissory note (individually, a "Promissory Note," and collectively, the "Promissory Notes"), and bear interest at the Applicable Federal Rate for short term loans, plus two (2%) percent. Principal and interest on the Promissory Notes are due on or before March 31, 2026, which was extended to June 30, 2027 as part of the December 2025 agreement. Only with the consent of the Lender, may the Promissory Notes be prepaid, in whole or in part, at any time without premium or penalty, but with interest on the amount or amounts prepaid.

At the election of Lender, the principal and accrued interest on Promissory Note(s) may be converted into the number of shares of the Company's Common Stock equal to the amount of principal and accrued interest on such Promissory Note divided by the price equal to the closing price of the Common Stock on the date of such Promissory Note, but in no event less than $3.00 per share.

In connection with the March 2025 Supplemental Credit Agreement, the Company agreed to issue the Lender warrants to purchase up to an aggregate of 100,000 shares of the Company's common stock, par value $0.001 per share (collectively, the "Warrants"). The Company shall issue to the Lender Warrants ratably, upon borrowings under the March 2025 Supplemental Line of Credit, with exercise prices equal to 150% of the closing price of the Company's common Stock on the date of the Promissory Note evidencing such draw, but in no event more than $10.00 per share nor less than $3.00 per share. The Warrants expire on July 31, 2029.

On July 8, 2025, the Company and Richard E. Uihlein (the "Lender") entered into a Supplemental Line of Credit Letter Agreement (the "July 2025 Supplemental Credit Agreement"), pursuant to which the Lender shall provide the Company a line of credit of up to $10.0 million (the "July 2025 Supplemental Line of Credit") to finance the Company's working capital needs. The Company may draw upon the July 2025 Supplemental Line of Credit through April 30, 2026. Additionally, in connection with the July 2025 Supplemental Credit Agreement, the maturity dates of the Convertible Notes Payable – Related Party and all borrowings under the Convertible Lines of Credit –Related Party were extended to September 30, 2026, and further adjusted to June 30, 2027 in connection with the extension of maturity in December 2025.

Each advance made pursuant to the July 2025 Supplemental Credit Agreement shall be evidenced by an unsecured, convertible promissory note (individually, a "Promissory Note," and collectively, the "Promissory Notes"), and bear interest at the Applicable Federal Rate for short term loans, plus two (2%) percent. Principal and interest on the Promissory Notes are due on or before June 30, 2027. Only with the consent of the Lender, may the Promissory Notes be prepaid, in whole or in part, at any time without premium or penalty, but with interest on the amount or amounts prepaid. At the election of Lender, the principal and accrued interest on Promissory Note(s) may be converted into the number of shares of the Company's Common Stock equal to the amount of principal and accrued interest on such Promissory Note divided by the price equal to the closing price of the Common Stock on the date of such Promissory Note, but in no event less than $3.00 per share.

In connection with the July 2025 Supplemental Credit Agreement, the Company agreed to issue the Lender warrants to purchase up to an aggregate of 200,000 shares of the Company's common stock, par value $0.001 per share (collectively, the "Warrants"). The Company shall issue to the Lender Warrants ratably, upon borrowings under the July 2025 Supplemental Line of Credit, with exercise prices equal to 150% of the closing price of the Company's common Stock on the date of the Promissory Note.

On December 19, 2025, the Company and Richard E. Uihlein (the "Lender") entered into a Supplemental Line of Credit Letter Agreement (the "December 2025 Supplemental Credit Agreement"), pursuant to which the Lender shall provide the Company a line of credit of up to $10.0 million (the "December 2025 Supplemental Line of Credit") to finance the Company's working capital needs. The Company may draw upon the December 2025 Supplemental Line of Credit through January 31, 2027.

Each advance made pursuant to the December 2025 Supplemental Credit Agreement shall be evidenced by an unsecured, convertible promissory note (individually, a "Promissory Note," and collectively, the "Promissory Notes"), and bear interest at the Applicable Federal Rate for short term loans, plus two (2%) percent. Principal and interest on the Promissory Notes are due on or before June 30, 2027. Only with the consent of the Lender, may the Promissory Notes be prepaid, in whole or in part, at any time without premium or penalty, but with interest on the amount or amounts prepaid. At the election of Lender, the principal and accrued interest on Promissory Note(s) may be converted into the number of shares of the Company's Common Stock equal to the amount of principal and accrued interest on such Promissory Note divided by the price equal to the closing price of the Common Stock on the date of such Promissory Note, but in no event less than $4.38 per share.

In connection with the December 2025 Supplemental Credit Agreement, the Company agreed to issue the Lender warrants to purchase up to an aggregate of 200,000 shares of the Company's common stock, par value $0.001 per share (collectively, the "Warrants"). The Company shall issue to the Lender Warrants ratably, upon borrowings under the July 2025 Supplemental Line of Credit, with exercise prices equal to 150% of the closing price of the Company's common Stock on the date of the Promissory Note.

The fair value of warrants that vest in the future based on borrowings will be computed when those borrowings occur and amortized over the remaining period through June 30, 2027.

On July 31, 2026, Richard E. Uihlein elected to convert all of the principal and accrued interest relating to the Convertible Line of Credit and Supplemental Lines of Credit into common stock pursuant to the terms of those lines of credit. As a result, on July 31, 2026, the Company issued a total of 34,376,167 shares of its common stock to Mr. Uihlein to extinguish the total principal of $91,000,000 and accrued interest of $14,806,981. The remaining unamortized costs of ~$577,000 related to the warrants was charged to additional paid in capital in July 2026.

Credit Facility Terms

Facility	Agreement Date	Commitment	Draw Period	Current Maturity (after Dec. 2025 extension)	Conversion Floor Price	Warrants Authorized	Warrant Expiration
Original Line of Credit	July 25, 2022	$ 60.0M	Through July 31, 2024	June 30, 2027	$3.00/share	1,700,000 shares	July 31, 2029
Supplemental LOC (2024)	March 29, 2024	$ 10.0M	Through March 31, 2025	June 30, 2027	$3.00/share	200,000 shares	July 31, 2029
November 2024 Supplemental LOC	November 14, 2024	$ 6.0M	Through May 31, 2025 (as amended)	June 30, 2027	$3.00/share	120,000 shares	July 31, 2029
March 2025 Supplemental LOC	March 31, 2025	$ 5.0M	Through September 30, 2025	June 30, 2027	$3.00/share	100,000 shares	July 31, 2029
July 2025 Supplemental LOC	July 8, 2025	$ 10.0M	Through April 30, 2026	June 30, 2027	$3.00/share	200,000 shares	July 31, 2029
December 2025 Supplemental LOC	December 29, 2025	$ 10.0M	Through January 31, 2027	June 30, 2027	$4.38/share	200,000 shares	Not stated

All maturity dates were originally Jan 31, 2026 (or later for newer facilities), extended to Sept 30, 2026 under the July 2025 agreement, and then further extended to June 30, 2027 under the December 2025 agreement. The December 2025 Supplemental LOC had not yet been drawn upon as of September 30, 2026.

Promissory Note Draws

Draw Date	Facility	Principal	Stated Rate (AFR + 2%)	Effective Rate	Conversion Price	Accrued Interest December 31, 2025
Dec 19, 2022	Original LOC	$ 10.0M	6.46%	~7.1%	$ 3.00	$ 2,158,000

All valuations assume zero dividends. Warrants for unfunded future borrowings will be valued when the related borrowings occur.

10. Segments

Operating segments are identified as components of an entity about which separate discrete financial information is available for evaluation by the CODM, or decision-making group, in making decisions on how to allocate resources and assess performance. The Company's CODM, the Chief Executive Officer, views the Company's operations as one operating segment, which is focused on creating new therapies for fibrotic disease based on targeting galectin proteins. The Company does not have revenue in the current comparative period, incurs expenses primarily in North America and manages the business activities on a consolidated basis.

The accounting policies of the fibrotic disease therapeutics segment are the same as those described in the summary of significant accounting policies.

The CODM assesses performance for the fibrotic disease therapeutics segment and decides how to allocate resources based on net loss that also is reported on the income statement as consolidated net loss. The measure of segment assets is reported on the balance sheet as cash and cash equivalents.

The Company has not generated any product revenue in the current period and expects to continue to incur significant expenses and operating losses for the foreseeable future as the Company advances its product candidates through all stages of development and clinical trials.

As such, the CODM uses cash forecast models in deciding how to invest into the fibrotic disease therapeutics segment. Such cash forecast models are reviewed to assess the entity-wide operating results and performance. Net loss is used to monitor budget versus actual results. Monitoring budgeted versus actual results, net cash used in operating activities for the period and cash on hand are used in assessing performance of the segment.

The table below summarizes the significant expense categories regularly reviewed by the CODM for the nine month periods ended September 30, 2026 and 2025 (in thousands).

	Nine Months Ended September 30,	
	2026	2025
	(in thousands)	
Operating expenses:		
Research and development	$ 5,930	$ 12,357
General and administrative	5,496	4,363
Total operating expenses	11,426	16,720
Total operating loss	(11,426)	(16,720)
Other income (expense):		
Interest income	93	101
Interest expense	(4,778)	(5,390)
Change in fair value of derivatives	(1,579)	(3,327)
Total other expense	(6,264)	(8,616)
Net loss	$ (17,690)	$ (25,336)
Preferred stock dividends	(120)	(76)
Net loss applicable to common stockholders	$ (17,810)	$ (25,412)

Other segment items included in segment loss includes interest income and interest expense.

The Company is a single operating segment and therefore the measure of segment net loss is the same as consolidated net loss and does not require reconciliation.

For the nine month periods ended September 30, 2026 and 2025, the net cash used in operating activities was $8.6 million and $17.8 million, respectively. The table below summarizes the significant asset categories regularly reviewed by the CODM as of September 30, 2026 and December 31, 2025 (in thousands).

	September 30, 2026	December 31, 2025
	(in thousands)	
Cash and cash equivalents	$ 11,706	$ 17,720

11. Commitments and Contingencies

Other Legal Proceedings

The Company records accruals for such contingencies to the extent that the Company concludes that their occurrence is probable, and the related damages are estimable. There are no significant pending legal proceedings.

Clinical Trial and Research Commitments

The Company has entered into agreements with contractors for research and development activities to further its product candidates. The contracts generally may be canceled at any time by providing thirty days' notice. The Company is involved in a dispute with a contract vendor for clinical trial management services. The Company has accrued its estimate of the amount owed to the contract vendor at September 30, 2026 and December 31, 2025.

12. Leases

The Company has one operating lease for its office space which was amended effective May 1, 2026 for a term of 24 months with no residual value guarantees or material restrictive covenants. The amended lease may be terminated by the Company effective April 30, 2027 or October 31, 2027 and continues the security deposit of $6,000. In addition to base rental payments included in the contractual obligations table above, the Company is responsible for our pro-rata share of the operating expenses for the building. Our lease cost for the three months ended September 30, 2026 and 2025 was approximately $18,000 and $13,000, respectively, and is included in general and administrative expenses. Our lease cost for the nine months ended September 30, 2026 and 2025 was approximately $51,000 and $41,000, respectively, and is included in general and administrative expenses.

As of September 30, 2026, the right to use lease asset consisted of $104,000 and is included in other assets. Also, at September 30, 2026, current lease liability of $62,000 is included in accrued expenses and the long term lease liability of $42,000 is included in other noncurrent liabilities.

Maturity of operating lease as of September 30, 2026 in thousands:

2026	18
2027	74
2028	26
Total	118
Less imputed interest	14
Present value of lease liability	$ 104

The discount rate used in calculating the present value of the lease payments was 14%.

13. Galectin Sciences LLC

In January 2014, we created Galectin Sciences, LLC (the “LLC” or “Investee”), a collaborative joint venture co-owned by SBH Sciences, Inc. (“SBH”), to research and develop small organic molecule inhibitors of galectin-3 for oral administration. The LLC was initially capitalized with a $400,000 cash investment to fund future research and development activities, which was provided by the Company, and specific in-process research and development (“IPR&D”) contributed by SBH. The estimated fair value of the IPR&D contributed by SBH, on the date of contribution, was $400,000. Initially, the Company and SBH each had a 50% equity ownership interest in the LLC, with neither party having control over the LLC. Accordingly, from inception through the fourth quarter of 2014, the Company accounted for its investment in the LLC using the equity method of accounting. Under the equity method of accounting, the Company’s investment was initially recorded at cost with subsequent adjustments to the carrying value to recognize additional investments in or distributions from the Investee, as well as the Company’s share of the Investee’s earnings, losses and/or changes in capital. The estimated fair value of the IPR&D contributed to the LLC was immediately expensed upon contribution as there was no alternative future use available at the point of contribution. The operating agreement provides that if either party does not desire to contribute its equal share of funding required after the initial capitalization, then the other party, providing all of the funding, will have its ownership share increased in proportion to the total amount contributed from inception. In the fourth quarter of 2014, after the LLC had expended the $400,000 in cash, SBH decided not to contribute its share of the funding required. Cumulatively as of September 30, 2026, the Company has contributed a total of $4,229,000, including $42,000 and $42,000 for the nine months ended September 30, 2026 and 2025, respectively, for expenses of the LLC. Since the end of 2014, SBH has contributed $711,000 for expenses in the LLC. As of September 30, 2026, the Company’s ownership percentage in the LLC was 85.6%. The Company accounts for the interest in the LLC as a consolidated, less than wholly owned subsidiary. Because the LLC’s equity is immaterial, the value of the non-controlling interest is also deemed to be immaterial.

Item 2. Management's Discussion and Analysis of Financial Condition and Results of Operations

In addition to historical information, the following Management's Discussion and Analysis of Financial Condition and Results of Operations contains forward-looking statements as defined under Section 21E of the Securities Exchange Act of 1934, as amended, and is subject to the safe harbor created therein for forward-looking statements. Such statements include, but are not limited to, statements concerning our anticipated operating results, research and development, clinical trials, regulatory proceedings, and financial resources, and can be identified by use of words such as, for example, "anticipate," "estimate," "expect," "project," "intend," "plan," "believe" and "would," "should," "could" or "may." All statements, other than statements of historical facts, included herein that address activities, events, or developments that the Company expects or anticipates will or may occur in the future, are forward-looking statements, including statements regarding: plans and expectations regarding clinical trials; plans and expectations regarding regulatory approvals; our strategy and expectations for clinical development and commercialization of our products; potential strategic partnerships; expectations regarding the effectiveness of our products; plans for research and development and related costs; statements about accounting assumptions and estimates; expectations regarding liquidity and the sufficiency of cash to fund currently planned operations through June 2027; our commitments and contingencies; and our market risk exposure. Forward-looking statements are based on current expectations, estimates and projections about the industry and markets in which Galectin Therapeutics operates, and management's beliefs and assumptions. These statements are not guarantees of future performance and involve certain known and unknown risks and uncertainties that could cause actual results to differ materially from those expressed or implied by such statements. Such risks and uncertainties are related to and include, without limitation,

- our early stage of development,
- our dependence on Mr. Uihlein for financing;
- our NAVIGATE trial was our only active clinical trial, and we currently do not have plans or funding to undertake another clinical trial;
- we have from time to time faced substantial doubt about our ability to continue as a going concern;
- we have incurred significant operating losses since our inception and cannot assure you that we will generate revenue or profit;
- our dependence on additional outside capital;
- we may be unable to enter into strategic partnerships for the development, commercialization, manufacturing and distribution of our proposed product candidates;
- uncertainties related to any litigation;
- uncertainties related to our technology and clinical trials, including expected dates of availability of clinical data;
- we may be unable to demonstrate the efficacy and safety of our developmental product candidates in human trials;
- we may be unable to improve upon, protect and/or enforce our intellectual property;
- we are subject to extensive and costly regulation by the U.S. Food and Drug Administration (FDA) and by foreign regulatory authorities, which must approve our product candidates in development and could restrict the sales and marketing and pricing of such products;
- competition and stock price volatility in the biotechnology industry;
- limited trading volume for our stock, concentration of ownership of our stock, and other risks detailed herein and from time to time in our SEC reports; and
- the occurrence of a widespread pandemic and its potential impact, which could delay clinical trial and development efforts, as well as the impact that such a pandemic has on the volatility of the capital market and our ability to access the capital market.
- other risks detailed herein and from time to time in our SEC reports, including our Annual Report on Form 10-K filed with the SEC for the fiscal year ended December 31, 2025, and our subsequent SEC filings.

The following discussion should be read in conjunction with the accompanying consolidated financial statements and notes thereto of Galectin Therapeutics appearing elsewhere herein.

Overview

We are a clinical stage biopharmaceutical company engaged in drug research and development to create new therapies for fibrotic disease, cancer and selected other diseases. Our drug candidates are based on our method of targeting galectin proteins, which are key mediators of biologic and pathologic functions. We use naturally occurring, readily-available plant products as starting material in manufacturing processes to create proprietary, patented complex carbohydrates with specific molecular weights and other pharmaceutical properties. These complex carbohydrate molecules are appropriately formulated into acceptable pharmaceutical formulations. Using these unique carbohydrate-based candidate compounds that largely bind and inhibit galectin proteins, particularly galectin-3, we are undertaking the focused pursuit of therapies for indications where galectin proteins have a demonstrated role in the pathogenesis of a given disease. We focus on diseases with serious, life-threatening consequences and those where current treatment options are limited specifically in metabolic dysfunction-associated steatohepatitis (MASH, formerly known as nonalcoholic steatohepatitis, or NASH) with cirrhosis and certain cancer indications. Our strategy is to establish and implement clinical development programs that add value to our business in the shortest period of time possible and to seek strategic partners when one of our programs becomes advanced and requires significant additional resources.

Our lead galectin-3 inhibitor is belapectin (GR-MD-02), which has been demonstrated in preclinical models to reverse liver fibrosis and cirrhosis and in clinical studies to decrease portal hypertension and prevent its complication: the development of esophageal varices. Belapectin has the potential to treat many diseases due to galectin-3's involvement in multiple key biological pathways such as fibrosis, immune cell function and immunity, cell differentiation, cell growth, and apoptosis (cell death). The importance of galectin-3 in the fibrotic process is supported by experimental evidence. Animals with the galectin-3 gene "knocked-out" can no longer develop fibrosis in response to experimental stimuli compared to animals with an intact galectin-3 gene. We are using our galectin-3 inhibitor to treat advanced liver fibrosis and liver cirrhosis in MASH patients. We have completed two Phase 1 clinical studies, a Phase 2 clinical study in MASH patients with advanced fibrosis (NASH-FX) and a second Phase 2b clinical trial in MASH patients with compensated cirrhosis and portal hypertension (NASH-CX).

In February 2023, we completed randomizations totaling 357 patients in a large, global Phase 2b/3 clinical trial, the NAVIGATE trial. Our study protocol was filed with the FDA on April 30, 2020, for a seamless adaptively-designed Phase 2b/3 clinical study evaluating the safety and efficacy of our galectin-3 inhibitor, belapectin, for the prevention of esophageal varices in patients with non-alcoholic steatohepatitis (MASH) cirrhosis. Further details are available at www.clinicaltrials.gov under study NCT04365868. The information contained therein is not incorporated herein by reference. In September 2020, the Company received a letter from the FDA providing comments, asking questions and providing guidance on various aspects of the ongoing NAVIGATE trial. These comments were addressed, and the study proceeded accordingly.

Based on feedback from the U.S. Food and Drug Administration (FDA), the Company decided to analyze stage 1 of the NAVIGATE clinical trial results as a stand-alone trial. Therefore, the decision was made to present full top-line efficacy and safety results, following last patient last visit and database lock which occurred in fall 2024. In December 2024, we presented top-line results of the NAVIGATE clinical trial. In the intent-to-treat (ITT) population (N=355), while the incidence of varices was 43.2% reduced in the belapectin 2 mg/kg dose group vs placebo, the composite endpoint did not reach statistical significance. The per-protocol population (PPP) was pre-defined as subjects who completed 18 months of therapy with upper endoscopy performed at both baseline and 18 months. In the PPP (n=287), the incidence of varices was reduced by 49.3% (compared to the targeted 52.5% reduction) in the belapectin 2 mg/kg dose group (p-value < 0.05). The Company further analyzed the two thirds of the completer patients in the NAVIGATE trial enrolled in the U.S. (n=186). The incidence of varices in this population was significantly reduced by 68.1% (p=0.02) in patients treated with belapectin 2 mg (4 out of 60) vs placebo (13 out of 62) in the U.S. While all three cohorts of patients in the U.S. had a higher percentage use of GLP-1 and statins than the rest of the world, the belapectin cohorts performed much better than placebo in the U.S.

Belapectin demonstrated consistent, meaningful effects across multiple key biomarkers in MASH cirrhosis. Fewer patients experienced clinically significant worsening of liver stiffness (LSM), while improvements in the ELF (Enhanced Liver Fibrosis) score suggested reduced fibrosis risk and potential improvement in liver function. Notably, the strongest impact was observed in the subgroup with the highest baseline risk (ELF score 11.3), underscoring belapectin's potential to benefit patients with advanced MASH cirrhosis. FibroScan® derived liver stiffness measurement (LSM) and the ELF test are the most widely used noninvasive markers to assess fibrosis severity and the risk of complications in patients with MASH and MASH cirrhosis.

Additionally, using the validated Baveno VII criteria for portal hypertension, treatment with belapectin was associated with a reduced presence of clinically significant portal hypertension (CSPH) and a lower risk of hepatic decompensation at 18 months.

- Belapectin reduced clinically significant portal hypertension category and risk of hepatic decompensation**.** Using Baveno VII criteria incorporating liver stiffness measurement (LSM) by transient elastography (FibroScan®) and platelet count, belapectin treatment reduced the presence of clinically significant portal hypertension (CSPH) and lowered the risk of hepatic decompensation in patients with MASH cirrhosis. Notably, among recent MASH cirrhosis trials reported, NAVIGATE enrolled one of the most advanced patient populations, as evidenced by the high proportion of subjects meeting CSPH criteria at baseline.

- All portal hypertension risk categories were improved comparing belapectin to placebo. Over 18 months, a higher proportion of patients treated with belapectin transitioned from the CSPH or probable CSPH categories to the no/low-risk category, compared to placebo.

As in prior trials, the safety profile of belapectin remains highly encouraging with incidence of adverse events and serious adverse events comparable across the three cohorts. Rates of discontinuation, adverse events (AEs), and serious adverse events (SAEs) were comparable to placebo, with no drug-related SAEs reported in the NAVIGATE trial.

Additionally, a study protocol entitled "A Single-dose, Open-label, Pharmacokinetic Study of Belapectin (GR-MD-02) in Subjects With Normal Hepatic Function and Subjects With Varying Degrees of Hepatic Impairment" has been filed with the FDA to examine the effects of the drug in subjects with normal hepatic function and subjects with varying degrees of hepatic impairment (study details are listed under study NCT04332432 on www.clinicaltrials.gov); this study became fully enrolled in February 2022 and favorable results were reported in 2023. The information contained therein is not incorporated herein by reference.

We endeavor to leverage our scientific and product development expertise as well as established relationships with outside sources to achieve cost-effective and efficient drug development. These outside sources, amongst others, provide us with expertise in preclinical models, pharmaceutical development, toxicology, clinical trial operations, pharmaceutical manufacturing, including physical and chemical drug characterization, and commercial development. We also have established through our majority-owned joint venture subsidiary, Galectin Sciences LLC, a discovery program developing small molecules that inhibit galectin-3 and may afford alternative drug delivery (e.g., oral) and as a result expand the potential uses of galectin-3 inhibitor beyond belapectin. Three chemical series of composition of matter patents have been filed.

We are also pursuing a development pathway to clinical enhancement and commercialization for our lead compounds in immuno-oncology following our previous successful collaboration with Providence Portland Cancer Center. In 2022, we filed a new IND with FDA for advanced or metastatic head and neck cancer using belapectin in combination with a checkpoint (PD-1) inhibitor and received a Study May Proceed letter. The proposed phase 2 trial commencement is dependent on timing of financing.

All of our proposed products are presently in development, including pre-clinical and clinical trials.

Our Drug Development Programs

Galectins are a class of proteins that are made by many cells in the body, but predominantly in cells of the immune system. As a group, these proteins are able to bind to sugar molecules that are attached to other proteins, called glycoproteins that are responsible for various functions within the body, most notably inflammation and fibrosis. Galectins, in particular galectin-3, act as a molecular glue, bringing together molecules that have sugars on them. Galectin-3, is known to be markedly increased in a number of significant diseases including inflammatory diseases leading to organs scarring (e.g. liver, lung, kidney, and heart) and cancers. The increase in galectin-3, by creating the so-called galectin-3 fibrosome, promotes the progression of multiple diseases. Published data substantiating the importance of galectin-3 in the fibrotic process arises from gene knockout experiments in animal studies. For instance, mice genetically altered to eliminate the galectin-3 gene, and thus unable to produce galectin-3, do not develop liver fibrosis in response to toxic insult to the liver.

We have one new proprietary chemical entity (NCE) in development, belapectin, which has shown promise in preclinical and clinical studies for the treatment of liver fibrosis, severe skin disease, and cancer (melanoma and head and neck squamous cell carcinoma). Currently, we are focusing on development of belapectin for the treatment of MASH cirrhosis and head and neck cancer. Belapectin is a proprietary, patented compound derived from natural, plant-based, starting materials, which following chemical processing, exhibits the properties of binding to and inhibiting galectin-3.

Our product pipeline is shown below:

Indication	Drug	Status
Prevention of esophageal varices in MASH cirrhosis		
Phase 1 interaction trial: NASH-CX trial and NASH-FX trial	belapectin	IND submitted January 2013. Results from the Phase 1 interaction trial were reported in 2014, with final results reported in January 2015. The Phase 2 NASH FX trial was conducted in patients with advanced fibrosis but not cirrhosis. Its principal purpose was to evaluate various imaging modalities. The NASH FX trial top line data was reported in September 2016 and published in Alimentary Pharmacology and Therapeutics in 2016. The Phase 2 NASH CX trial was conducted in patients with compensated cirrhosis and portal hypertension. The NASH CX trial top line data was reported in December 2017 and was published in *Gastroenterology* in 2020.
MASH NAVIGATE		Following FDA feedback, the NAVIGATE trial was for the prevention of esophageal varices in MASH patients with compensated cirrhosis and clinical signs of portal hypertension. The final patient was randomized in February 2023 and top-line results were presented in December 2024. Additional analysis from the trial has been presented in 2025 and continues.
Phase 1 study: hepatic insufficiency		A hepatic impairment study was conducted in subjects with normal hepatic function and subjects with varying degrees of hepatic impairment (www.clinicaltrials.gov NCT04332432) and began enrolling patients in the second quarter of 2020. The study completed enrollment in February 2022 and favorable results were presented in 2023.
Cancer Immunotherapy		
Melanoma, Head, Neck Squamous Cell Carcinoma (HNSCC)	belapectin	Investigator IND study was completed. A Phase 1B study began in Q-1 2016. Early data was reported in February 2017 and additional data were reported in September 2018. Data from an extension trial was reported in July 2021 for additional melanoma and HNSCC patients which provided a rational basis for additional trials which the Company is exploring. In the third quarter of 2022, the Company announced its IND application for belapectin in combination with a checkpoint inhibitor for the treatment of HNSCC was filed and a Study May Proceed letter was received from FDA. The Company is reviewing options for financing this trial which will determine when such trial could commence.

Liver cirrhosis. Belapectin is our lead product candidate for treatment of compensated MASH cirrhosis in patients with portal hypertension. Our preclinical data show that belapectin has a significant therapeutic effect on liver fibrosis as shown in several relevant animal models. In addition, in MASH animal models, belapectin has been shown to reduce liver fat, inflammation, portal pressure, and ballooning degeneration (death of liver cells). Therefore, we chose belapectin as the lead candidate in a development program targeted initially at fibrotic liver disease associated with non-alcoholic steatohepatitis (MASH). In January 2013, an Investigational New Drug ("IND") was submitted to the FDA with the goal of initiating a Phase 1 study in patients with MASH and advanced liver fibrosis to evaluate the safety of belapectin and pharmacodynamics biomarkers of disease. On March 1, 2013, the FDA indicated we could proceed with a US Phase 1 clinical trial for belapectin with a development program aimed at obtaining support for a proposed indication of belapectin for treatment of MASH with advanced fibrosis. The Phase 1 trial was completed and demonstrated that belapectin up to 8 mg/kg Lean Body Mass (LBM), i.v. was safe and well tolerated.

Additionally, an open label drug-drug phase 1 interaction study was completed in healthy volunteers during the second quarter of 2015 with belapectin and it showed that with 8 mg/kg LBM dose of belapectin and 2 mg/kg LBM dose of midazolam there was no drug-drug interaction, and no serious adverse events or drug-related adverse events were observed. The secondary objective was to assess the safety and tolerability of belapectin when administered concomitantly with midazolam.

Our Phase 2 program in fibrotic disease consisted of two separate human clinical trials. The main clinical trial was the Phase 2b NASH-CX study for one year for patients with MASH with compensated cirrhosis and portal hypertension, which began enrolling patients in June 2015. This study was a randomized, placebo-controlled, double-blind, parallel-group Phase 2b trial to evaluate the safety and efficacy of belapectin for treatment of liver fibrosis and resultant portal hypertension in MASH patients with compensated cirrhosis. A smaller, exploratory NASH-FX trial was conducted to explore potential use of various non-invasive imaging techniques in MASH patients with advanced fibrosis but not cirrhosis.

NASH-FX Trial: The NASH-FX trial was a Phase 2a pilot trial for patients with MASH and advanced fibrosis that explored use of three non-invasive imaging technologies. It was a short, single site, four-month trial in 30 MASH patients with advanced fibrosis (F3) randomized 1:1 to either 9 bi-weekly doses of 8 mg/kg LBM of belapectin or placebo. The trial did not meet its primary endpoint as measured using multi-parametric magnetic resonance imaging (LiverMultiScan$^{(R)}$, Perspectum Diagnostics). The trial also did not meet secondary endpoints that measure liver stiffness as a surrogate for fibrosis using, magnetic resonance-elastography and FibroScan® score. With a four-month treatment period and a small number of patients per arm the study was not powered to demonstrate efficacy results in established advanced liver fibrosis. In the trial however, belapectin was found to be safe and well tolerated with no serious adverse events and showing evidence of a pharmacodynamic effect. These results provided support for further development in MASH.

NASH-CX Trial: The NASH-CX trial was a larger multi-center clinical trial that explored the use of belapectin for the treatment of patients with well-compensated MASH cirrhosis and portal hypertension. Enrollment was completed in September 2016, and a total of 162 patients at 36 sites in the United States were randomized to receive either 2 mg/kg LBM of belapectin, 8 mg/kg LBM of belapectin or placebo. Approximately 50% of patients at baseline had esophageal varices (a complication of portal hypertension). The primary endpoint was a reduction in hepatic venous pressure gradient (HVPG), a hemodynamic measure that estimates portal hypertension. Patients received an infusion of belapectin or placebo every other week for one year and were evaluated to determine the change in HVPG as compared with placebo. Secondary or exploratory endpoints included evaluation of fibrosis on liver biopsy, measurement of liver stiffness (FibroScan) and assessment of liver metabolism (^{13}C-methacetin breath test). Top line data readout was reported in December 2017. The study demonstrated a favorable safety profile and clinically meaningful efficacy results in patients without esophageal varices at baseline as demonstrated by a decrease in portal pressure associated with the prevention of development of varices when compared to placebo.

In the total patient population, the primary endpoint HVPG showed a trend toward benefit with belapectin treatment, but the difference from placebo was not statistically significant. The mean change in HVPG of placebo from baseline to week 54 was 0.3 mm Hg. The mean change in HVPG from baseline was -0.37 and -0.42 for the 2 mg/kg LBM dose and 8 mg/kg LBM dose of belapectin, respectively.

In those MASH cirrhosis patients with portal hypertension who have not yet developed esophageal varices at baseline (about 50% of the total population), there was a statistically significant effect of the 2 mg/kg LBM dose of belapectin on the absolute change in HVPG (-1.08 mm Hg, $p<0.01$). The effect of the 8 mg/Kg LBM dose of belapectin on absolute or percent change in HVPG from baseline to week 54 was not significant.

Also because of the clinical relevance of this population, a responder analysis was performed on those patients without esophageal varices at baseline. Analysis was performed looking at two groups: those with an equal to or greater than 2 mm Hg decrease in HVPG from baseline or those with an equal to or greater than 2 mm Hg and a greater than or equal to 20% decrease in HVPG from baseline. In both cases, the change observed in the belapectin 2 mg/kg LBM group was statistically significant ($p<0.01$) while that of the 8 mg/kg LBM group was not.

Over the 54-week treatment period, in patients without varices at baseline there were also a statistically significantly fewer new varices that developed in the belapectin treatment groups (0% and 4% in the 2 mg/kg LBM and the 8 mg/kg LBM, respectively) vs placebo (18%). This meant that the decrease seen in portal pressure was associated with a decreased incidence of esophageal varices. The results were noticeable in the belapectin 2 mg/Kg LBM group as statistical significance against placebo was achieved for both parameters. As esophageal varices can lead to hemorrhagic complication, which can be fatal, and are a severe complication of liver cirrhosis, we believe the prevention of esophageal varices may represent a clinically relevant measure of clinical efficacy in patients with MASH cirrhosis.

The major conclusions from the NASH-CX trial results were that: (i) belapectin had a statistically significant and clinically meaningful effect in improving HVPG vs placebo in patients with MASH cirrhosis who did not have esophageal varices at baseline, (ii) Belapectin in the total patient population was associated with a statistically significant improvement in hepatocyte ballooning (i.e. cell death), (iii) There was a statistically significant reduction ($p=0.02$) in the development of new esophageal varices in drug-treated patients compared to placebo. We believe that the prevention of esophageal varices is a clinically relevant endpoint related to patient outcomes, (iv) While there was a drug effect in both the 2 mg/kg LBM and 8 mg/kg LBM groups on the development of varices and liver biopsy there was a consistently greater and statistically significant effect of the 2 mg/kg LBM dose of belapectin, (v) belapectin appears to be safe and well tolerated in this one year clinical trial, a feature that is of prime importance for a cirrhotic population and (vi) This is the first large, randomized clinical trial to demonstrate a clinically meaningful improvement in portal hypertension in patients with compensated MASH cirrhosis who have not yet developed esophageal varices.

Further information and details on the NASH-CX results is available in public presentations posted to our website and filed with the SEC and in a peer reviewed publication in *Gastroenterology* 2020;158:1334–1345.

MASH NAVIGATE Trial: Building on the experience of the NASH-CX trial, the NAVIGATE Trial was designed as a seamless adaptively-designed Phase 2b/3 clinical study evaluating the safety and efficacy of our galectin-3 inhibitor, belapectin, for the prevention of esophageal varices in patient with metabolic dysfunction-associated steatohepatitis (MASH, formerly known as nonalcoholic steatohepatitis, or MASH) with cirrhosis. The major features of this innovative Phase 2b/3 study design are: i) In patients with MASH cirrhosis and clinical signs of portal hypertension but without esophageal varices at baseline, evaluated by an esophago-gastro-duodeno endoscopy, this trial will assess the effect of belapectin on the incidence of new varices (the primary endpoint) – as well as assessing the effect of belapectin on the incidence of additional clinically significant cirrhosis-related outcomes (a key secondary efficacy endpoint), (ii) The study targets MASH patients with a clearly identified unmet medical need: patients with compensated cirrhosis who have clinical signs of portal hypertension and, thus, are at risk of developing esophageal varices, a potentially life-threatening complication of cirrhosis (bleeding varices are a cause of death in about one-third of cirrhotic patients). There is currently no approved treatment for preventing varices in these patients. In addition, the development of esophageal varices reflects the progression of hepatic cirrhosis and thus portends the development of other cirrhosis complications such as ascites, hepatic encephalopathy, and liver failure, and (iii) During the first 18 months, two belapectin dose levels (2 mg/kg LBM and 4 mg/kg LBM) will be compared to placebo (phase 2b).

Based on feedback from the U.S. Food and Drug Administration (FDA), the Company has decided to analyze stage 1 of the NAVIGATE clinical trial results as a stand-alone trial. Therefore, a decision was made to present full top-line efficacy and safety results, following last patient last visit and database lock which occurred in fall 2024. In December 2024, we presented top-line results of the NAVIGATE clinical trial. In the intent-to-treat (ITT) population (N=355), while the incidence of varices was 43.2% reduced in the belapectin 2 mg/kg dose group vs placebo, the composite endpoint did not reach statistical significance. The per-protocol population (PPP) was pre-defined as subjects who completed 18 months of therapy with upper endoscopy performed at both baseline and 18 months. In the PPP (n=287), the incidence of varices was reduced by 49.3% (compared to the targeted 52.5% reduction) in the belapectin 2 mg/kg dose group (p-value < 0.05). The Company further analyzed the two thirds of the completer patients in the NAVIGATE trial enrolled in the U.S. (n=186). The incidence of varices in this population was significantly reduced by 68.1% (p=0.02) in patients treated with belapectin 2 mg (4 out of 60) vs placebo (13 out of 62) in the U.S. While all three cohorts of patients in the U.S. had a higher percentage use of GLP-1 and statins than the rest of the world, the belapectin cohorts performed much better than placebo in the U.S. The Company continued to analyze trial data and reported additional information in 2025.

The Company submitted a Type C meeting request in the first quarter of 2026. Subsequently, FDA granted an in-person Type C meeting which was held in the second quarter of 2026. The Company reached agreement with FDA on the primary endpoint and regulatory path forward for the potential full approval of belapectin for patients with MASH cirrhosis and portal hypertension. The Company filed a Phase 3 protocol with the FDA in the third quarter of 2026 and is actively exploring strategic and financial partnership opportunities to support the continued development and commercialization of belapectin.

As in prior trials, the safety profile of belapectin remains highly encouraging with incidence of adverse events and serious adverse events comparable across the three cohorts. Rates of discontinuation, adverse events (AEs), and serious adverse events (SAEs) were comparable to placebo, with no drug-related SAEs reported in the NAVIGATE trial.

In the NAVIGATE trial, as proposed in the protocol, secondary endpoints include a composite clinical outcomes endpoint, including varices requiring treatment (development of large varices or varices with a red wale), decompensating events, all-cause mortality, MELD score increase, liver transplant. Also, MASH non-invasive biomarkers will be evaluated. To target a population at risk of developing esophageal varices, patient selection was based on clinical signs of portal hypertension, including, but not limited to, a low platelet count, an increased spleen size, an increased liver stiffness, and/or evidence of abdominal collaterals circulation.

The focus and goal of the therapeutic program is to stop the progression of and/or reverse portal hypertension and thereby prevent the development of varices, potentially one of the most life-threatening complications of cirrhosis. Based on the results of the NASH-CX trial and subject to confirmation in later stage clinical trials, we believe that this goal is achievable in a significant portion of the MASH cirrhosis patient population i.e. those MASH cirrhosis patients with clinical signs of portal hypertension for whom, currently, apart from a liver transplantation, no specific liver targeted, treatments are available.

Further details on the NAVIGATE trial can be found on www.clinicaltrials.gov under study NCT04365868 and on our NAVIGATE website (navigatenash.com). The information contained therein is not incorporated herein by reference.

The Company also has completed a Hepatic Impairment Study, which ran in parallel with the phase 2b/3 trial as part of the development program. The Hepatic Impairment Study was conducted at three sites and involved approximately 40 patients (divided amongst normal healthy volunteers, and patients with hepatic impairment categorized as Child-Turcotte-Pugh (CTP) classes A (mild), B (moderate), and C (severe). Each subject received a single infusion of belapectin (4 mg/kg LBM) and their serum belapectin levels were monitored for up to approximately two weeks to define the effects of various stages of cirrhosis on serum belapectin levels. The tolerance and safety of belapectin was evaluated. Enrollment in this study was completed in February 2022, and the final results were presented the The Liver Meeting™ 2023, hosted by the American Association for the Study of Liver Diseases. The data indicated that belapectin exposure did not increase with the degree of hepatic insufficiency, a property that is consistent with the observed distribution of the drug into activated macrophages.Further details on this hepatic impairment study can be found on www.clinicaltrials.gov study NCT04332432.

Cancer Immunotherapy. We believe there is potential for galectin inhibition to play a key role in the innovative area of cancer immunotherapy. For example, there have been several recent approvals of drugs that enhance a patient's immune system to fight cancer. It is our goal to use ourgalectin-3 inhibitor to further enhance the immune system function to help the body to fight cancer in a way that complements other approaches to this type of therapy. This hypothesis is supported by the fact that galectin-3 is expressed at high levels in multiple types of tumors and their micro-environment, where it fosters the malignant nature of the tumors, and protects the tumors from immune attack by the patient's own defense mechanism. Our drug candidates provide a promising new therapeutic approach to enhance the activity of the immune system against cancer cells. Preclinical studies have indicated that belapectin enhances the immune response to cancer cells, increased tumor shrinkage and enhanced survival in immune competent mice with prostate, breast, melanoma and sarcoma cancers when combined with one of the immune checkpoint inhibitors, anti-CTLA-4 or anti-PD-1, or with the immune cell activator anti-OX40. These preclinical data led to the filing of two Investigator-sponsored INDs and the initiation of Phase 1B studies of belapectin in combination with Yervoy® (ipilimumab) in metastatic melanoma and another phase 1B study in combination with KEYTRUDA (pembrolizumab) in patients with metastatic melanoma and head and neck squamous cell carcinoma. These studies were conducted under the sponsorship of Providence Portland Medical Center's Earle A. Chiles Research Institute (EACRI).

The phase IB study in combination with Yervoy was rapidly discontinued after the first patients were recruited because of the availability of new treatment in the selected population.

Promising results were reported in the Phase 1b trial combining belapectin with pembrolizumab (KEYTRUDA®). When aggregated cohorts are combined, in advanced melanoma, a 50% objective response rate with belapectin in combination with KEYTRUDA, was documented. In addition, a 33% response rate was documented in patients with head and neck cancer. The results have been published in 2021 in a highly rated peer reviewed journal (Curti et al. Journal of Immunotherapy of cancer 2021;9:e002371). There was also a suggestion that the combination of belapectin with pembrolizumab could decrease the auto-immune side-effect induced by pembrolizumab. These side-effects, which are directly linked to the mechanism of action of pembrolizumab, can be poorly tolerated and even severe enough to lead to treatment interruption, even if the effect on the cancer was encouraging. This is, a very frustrating situation for patients who have to discontinue an active treatment but have no other options available to them. We believe these data, taken together with the observed favorable safety and tolerability of the combination, provide a rationale to move the belapectin program in oncology forward.

Late in 2021, we engaged three noted physicians – Dr. Chetan Bettegowda, from Johns Hopkins, and Dr. Nishant Agrawal and Dr. Ari Rosenberg, both from University of Chicago Medical Center – as consultants to help define the path forward in oncology. In consultation with our oncology experts, we have now selected the treatment of recurrent or metastatic head and neck cancer as the lead indication to pursue for belapectin in combination with an immune checkpoint inhibitor. The decision is notably based on the lack of available treatments for these patients, the limited number of therapies in development, and the resulting very high medical need. We filed an IND with FDA and are planning a phase 2 trial to be filed with the FDA oncology division.

Results of Operations

Three and Nine Months Ended September 30, 2026 Compared to Three and Nine Months Ended September 30, 2025

Research and Development Expense.

Research and Development Expense.

	Three Months Ended September 30,		Nine Months Ended September 30,		2026 as Compared to 2025			
					Three Months		Nine Months	
	2026	2025	2026	2025	$ Change	% Change	$ Change	% Change
	(In thousands, except %)							
Research and development	$ 1,564	$ 2,612	$ 5,930	$ 12,358	$ (1,048)	(40)%	(6,428)	(52)%

We generally categorize research and development expenses as either direct external expenses, comprised of amounts paid to third party vendors for services, or all other research and development expenses, comprised of employee payroll and general overhead allocable to research and development. We consider a clinical program to have begun upon acceptance by the FDA, or similar agency outside of the United States, to commence a clinical trial in humans, at which time we begin tracking expenditures by the product candidate. Clinical program expenses comprise payments to vendors related to preparation for, and conduct of, all phases of the clinical trial, including costs for drug manufacture, patient dosing and monitoring, data collection and management, oversight of the trials and reports of results. Pre-clinical expenses comprise all research and development amounts incurred before human trials begin, including payments to vendors for services related to product experiments and discovery, toxicology, pharmacology, metabolism, and efficacy studies, as well as manufacturing process development for a drug candidate.

Our research and development expenses were as follows:

Direct external expenses:	Three Months Ended September 30,		Nine Months Ended September 30,	
	2026	2025	2026	2025
		(in thousands)		
Clinical programs	$ 413	$ 962	$ 2,149	$ 7,135
Pre-clinical activities	33	43	191	581
All other research and development expenses	1,118	1,607	3,590	4,642
	$ 1,564	$ 2,612	$ 5,930	$ 12,358

Clinical activities decreased primarily due to timing of incurrence of expenditures related to our NAVIGATE clinical trial which ended in the first quarter of 2025. Pre-clinical activities decreased due to decrease in work in those areas. All other research and development expenses decreased primarily due to fewer employees in 2026 than in 2025.

Both the time required and costs we may incur in order to commercialize a drug candidate that would result in material net cash inflow are subject to numerous variables, and therefore we are unable at this stage of our development to forecast useful estimates. Variables that make estimates difficult include the number of clinical trials we may undertake, the number of patients needed to participate in the clinical trial, patient recruitment uncertainties, trial results as to the safety and efficacy of our product, and uncertainties as to the regulatory agency response to our trial data prior to receipt of marketing approval. Moreover, the FDA or other regulatory agencies may suspend clinical trials if we or an agency believes patients in the trial are subject to unacceptable risks or find deficiencies in the conduct of the clinical trial. Delays or rejections may also occur if governmental regulation or policy changes during our clinical trials or in the course of review of our clinical data. Due to these uncertainties, accurate and meaningful estimates of the ultimate cost to bring a product to market, the timing of costs and completion of our program and the period during which material net cash inflows will commence are unavailable at this time.

General and Administrative Expense.

	Three Months Ended September 30,		Nine Months Ended September 30,		2026 as Compared to 2025			
					Three Months		Nine Months	
	2026	2025	2026	2025	$ Change	% Change	$ Change	% Change
	(In thousands, except %)							
General and administrative	$ 1,803	$ 1,587	$ 5,486	$ 4,363	$ 216	14%	$ 1,123	26%

General and administrative expenses consist primarily of salaries including stock-based compensation, legal and accounting fees, insurance, investor relations, business development and other office related expenses. The primary reasons for the increase in general and administrative expenses for the three and nine month periods ended September 30, 2026 as compared to the same periods in 2025 are due to increases in non-cash stock-based compensation expenses of approximately $378,000 and $1,058,000, respectively.

Other Income and Expense

During the nine months ended September 30, 2026, other income and expense consisted of $93,000 of interest income offset by interest expense and amortization of debt discounts on convertible notes payable and convertible line of credit of $4,778,000 and change in fair value of derivatives of $1,578,000.

During the nine months ended September 30, 2025, other income and expense consisted of $101,000 of interest income offset by interest expense and amortization of debt discounts on convertible notes payable and convertible line of credit of $5,390,000 and change in fair value of derivatives of $3,327,000.

Liquidity and Capital Resources

Since our inception on July 10, 2000, we have financed our operations from proceeds of public and private offerings of debt and equity. As of September 30, 2026, we raised a net total of $343 million from these offerings. At September 30, 2026, the Company had $11.7 million of unrestricted cash and cash equivalents in addition to $10 million remaining available under a line of credit provided by our chairman available to fund future operations. The Company believes there is sufficient cash to fund currently planned operations through June 2027. These factors raise substantial doubt about the Company's ability to continue as a going concern for a period of 12 months from the issuance date of this Form 10-Q. The ability of the Company to continue as a going concern is likely dependent on its ability to raise capital; however, the Company's cash position may not be sufficient to support its daily operations after June 2027. We will require more cash to fund our operations after June 2027. There can be no assurance that we will be successful in obtaining such new financing or, if available, that such financing will be on terms favorable to us.

Net cash used in operations decreased by $9,263,000 to $8,570,000 for the nine months ended September 30, 2026, as compared to $17,833,000 for the nine months ended September 30, 2025. Cash operating expenses decreased principally due to the completion of our NAVIGATE clinical trial with belapectin in 2025.

Off-Balance Sheet Arrangements

We have not created, and are not a party to, any special-purpose or off-balance sheet entities for the purpose of raising capital, incurring debt or operating parts of our business that are not consolidated into our financial statements. We do not have any arrangements or relationships with entities that are not consolidated into our financial statements that are reasonably likely to materially affect our liquidity or the availability of capital resources.

Application of Critical Accounting Policies and Estimates

The preparation of condensed consolidated financial statements requires us to make estimates and judgments that affect the reported amounts of assets, liabilities, expenses, and related disclosure of contingent assets and liabilities. On an ongoing basis, we evaluate our estimates, including those related to accrued expenses, stock-based compensation, contingencies and litigation. We base our estimates on historical experience, terms of existing contracts, our observance of trends in the industry, information available from other outside sources and on various other factors that we believe to be appropriate under the circumstances. Actual results may differ from these estimates under different assumptions or conditions.

Critical accounting policies are those policies that affect our more significant judgments and estimates used in preparation of our consolidated financial statements. We believe our critical accounting policies include our policies regarding stock-based compensation, accrued expenses and income taxes. For a more detailed discussion of our critical accounting policies, please refer to our 2025 Annual Report on Form 10-K.

Item 3. Quantitative and Qualitative Disclosures about Market Risk

Market risk represents the risk of loss that may impact our financial position, operating results or cash flows due to changes in the U.S. interest rates. The primary objective of our investment activities is to preserve cash until it is required to fund operations. To minimize risk, we maintain our portfolio of cash and cash equivalents in operating bank accounts and money market funds. Since our investments are short-term in duration, we believe that we are not subject to any material market risk exposure.

Item 4. Controls and Procedures

Evaluation of Disclosure Controls and Procedures

Our management, with the participation of the Chief Executive Officer and Chief Financial Officer, evaluated the effectiveness of our disclosure controls and procedures (as defined in Rule 13a-15(e) promulgated under the Securities Exchange Act of 1934) and concluded that, as of September 30, 2026, our disclosure controls and procedures were not effective due to the material weakness in internal control over financial reporting described below.

As previously disclosed in our Annual Report on Form 10-K for the year ended December 31, 2025, we identified a material weakness in our internal control over financial reporting. Specifically, we did not implement and maintain effective controls related to the valuation of derivative liabilities associated with contingent interest on convertible notes payable, specifically controls over the review of interest forecasts used in the valuation of the derivative liabilities due to the extension of the maturity dates of the convertible notes payable. This material weakness creates a reasonable possibility that a material misstatement in our consolidated financial statements would not be prevented or detected on a timely basis.

Remediation Plan

In an effort to address the identified material weakness and enhance our internal controls related to our valuation of derivative liabilities process, we continue to maintain our financial reporting process we followed to prepare consolidated financial statements in accordance with GAAP for audit committee meetings on a quarterly and annual basis. We expect to remedy this material weakness by conducting additional training, using additional third-party consultants with appropriate knowledge, experience, and/or training commensurate with our technical accounting and financial reporting requirements to enhance the process going forward, a combination thereof, or any other remedial measures that we deem appropriate. Our ongoing remediation efforts are focused on additional reviews in the event of any future potential changes to financial instruments associated with derivatives related to internal control over financial reporting.

Notwithstanding the material weakness, our management has concluded that the consolidated financial statements included in this Quarterly Report on Form 10-Q fairly present, in all material respects, our financial position, results of operations, and cash flows for the periods presented in conformity with U.S. generally accepted accounting principles.

Our management, including our Chief Executive Officer and Chief Financial Officer, does not expect that our disclosure controls and procedures or our internal controls will prevent all errors and all fraud. A control system, no matter how well conceived and operated, can provide only reasonable, not absolute, assurance that the objectives of the control system are met. Further, the design of a control system must reflect the fact that there are resource constraints, and the benefits of controls must be considered relative to their costs. Because of the inherent limitations in all control systems, no evaluation of controls can provide absolute assurance that all control issues and instances of fraud, if any, within the Company have been detected.

Changes in Internal Control Over Financial Reporting

Other than the ongoing remediation efforts related to the material weakness described above, there were no changes in our internal control over financial reporting during the quarter ended September 30, 2026 that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

PART II — OTHER INFORMATION

Item 1. Legal Proceedings

None.

Item 1A. Risk Factors

The information set forth in this report should be read in conjunction with the risk factors set forth in Item 1A, “Risk Factors,” of Part I of our Annual Report on Form 10-K for the year ended December 31, 2025, which could materially impact our business, financial condition or future results.

Item 2. Unregistered Sales of Equity Securities and Use of Proceeds

As previously disclosed in a Current Report on Form 8-K filed on August 4, 2026, on July 31, 2026, the Company issued 34,376,167 shares of its common stock, par value $0.001 per share, to Richard E. Uihlein, the Company's Chairman of the Board and largest stockholder, upon the conversion of all outstanding convertible promissory notes (the "Notes") issued to Mr. Uihlein under the following line of credit facilities:

(i) the Line of Credit Letter Agreement dated July 25, 2022 (providing for a $60,000,000 credit facility);

(ii) the Supplemental Line of Credit Agreement dated March 29, 2024 (providing for a $10,000,000 supplemental credit facility);

(iii) the November 2024 Supplemental Line of Credit Agreement dated November 14, 2024 (providing for a $6,000,000 supplemental credit facility);

(iv) the March 2025 Supplemental Line of Credit Agreement dated March 31, 2025 (providing for a $5,000,000 supplemental credit facility); and

(v) the July 2025 Supplemental Line of Credit Agreement dated July 8, 2025 (providing for a $10,000,000 supplemental credit facility).

The Company and Mr. Uihlein are also parties to a December 2025 Supplemental Line of Credit Agreement dated December 19, 2025 (providing for an additional $10,000,000 supplemental credit facility); however, no amounts have been drawn under that facility and no convertible promissory notes have been issued thereunder. The December 2025 Supplemental Line of Credit Agreement remains outstanding, undrawn, and available to the Company in accordance with its terms, and is not affected by the conversion.

The conversion resulted in the elimination of $91.0 million in aggregate principal and approximately $14.8 million in aggregate accrued interest (approximately $105.8 million in total) in exchange for the issuance of 34,376,167 shares of Common Stock. Each Note was converted at the conversion price specified therein, which was not less than the closing price of the Common Stock on The Nasdaq Capital Market on the date such Note was issued, subject to a $3.00 per share floor price. The blended average conversion price across all Notes was approximately $3.07 per share.

The issuance of the shares of Common Stock upon conversion was exempt from registration under the Securities Act of 1933, as amended (the "Securities Act"), pursuant to Section 3(a)(9) thereof, as the shares were issued in exchange for outstanding securities of the Company (the Notes) exclusively with existing security holders of the Company, and no commission or other remuneration was paid or given directly or indirectly for soliciting such exchange.

Immediately, following the conversion on July 31, 2026, the Company had approximately 100,849,644 shares of Common Stock and 197,500 of Series A Voting Preferred Stock outstanding. Mr. Uihlein beneficially owned approximately 44.3% of the outstanding voting power on an actual basis and approximately 49.3% of the outstanding voting power (calculated in accordance with Rule 13d-3 under the Securities Exchange Act of 1934, as amended, and including shares issuable upon exercise of outstanding warrants held by Mr. Uihlein).

The shares of Common Stock issued to Mr. Uihlein have not been registered under the Securities Act and are subject to restrictions on resale. The Company and Mr. Uihlein agreed that any registration rights with respect to the 34,376,167 shares issued remain in full force and effect in accordance with the terms of the credit facilities, and further agreed that the Company's obligation to file a registration statement (or a post-effective amendment or supplement to an existing registration statement) with the Securities and Exchange Commission registering the resale of the 34,376,167 shares shall not arise until Mr. Uihlein delivers written notice to the Company requesting the filing of such registration statement (the "Registration Request Notice"). Upon receipt of the Registration Request Notice, the Company shall file the registration statement within 180 days of the date of such notice and shall use commercially reasonable efforts to cause such registration statement to become effective as promptly as practicable thereafter.

Item 3. Defaults Upon Senior Securities

None

Item 4. Mine Safety Disclosures

Not Applicable

Item 5. Other Information

None.

Item 6. Exhibits

SIGNATURES

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf by the undersigned, thereunto duly authorized, on November 16, 2026.

GALECTIN THERAPEUTICS INC.

By: /s/ Joel Lewis
Name: Joel Lewis
Title: Chief Executive Officer and President
(principal executive officer)

By: /s/ Jack W. Callicutt
Name: Jack W. Callicutt
Title: Chief Financial Officer
(principal financial and accounting officer)

Exhibit 31.1

Certification Pursuant to Rule 13a-14(a) of the Securities Exchange Act of 1934

I, Joel Lewis, certify that:

1. I have reviewed this quarterly report on Form 10-Q of Galectin Therapeutics Inc;

2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;

3. Based on my knowledge, the financial statements, and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the registrant as of, and for, the periods presented in this report;

4. The registrant's other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the registrant and we have:

   (a) Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the registrant, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;

   (b) Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;

   (c) Evaluated the effectiveness of the registrant's disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and

   (d) Disclosed in this report any change in the registrant's internal control over financial reporting that occurred during the registrant's most recent fiscal quarter (the registrant's fourth fiscal quarter in the case of an annual report) that has materially affected, or is reasonably likely to materially affect, the registrant's internal control over financial reporting; and

5. The registrant's other certifying officer and I have disclosed, based on our most recent evaluation of internal control over financial reporting, to the registrant's auditors and the audit committee of the registrant's board of directors (or persons performing the equivalent functions):

   (a) All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the registrant's ability to record, process, summarize and report financial information; and

   (b) Any fraud, whether or not material, that involves management or other employees who have a significant role in the registrant's internal control over financial reporting.
